

AI Productivity Toolkit

Practical AI workflows that save time, improve clarity and reduce repetitive work without adding complexity.

What this toolkit is

This toolkit is for managers, operators, founders and small-business owners who want AI to support useful work.

It focuses on simple workflows you can repeat: planning, summarising, writing, analysis, process improvement and follow-up. The goal is not to automate judgement. The goal is to reduce low-value friction so people can think better and act faster.

Principles for useful AI work

- ☐ Use AI where the task is repetitive, messy or draft-heavy.
- ☐ Keep human judgement in decisions, people issues and customer promises.
- ☐ Use AI to create a first draft, not the final truth.
- ☐ Give context before asking for output.
- ☐ Ask for risks, assumptions and missing information.
- ☐ Keep sensitive data out of tools unless your business has approved the workflow.
- ☐ Save prompts that work so the team can repeat them.

Workflow 1 - Daily reset

Use this when the day feels scattered.

Prompt - Act as a calm productivity assistant for a business operator. Here is my current task list, meetings and deadlines. Create a realistic plan for today. Identify the highest-impact work, the tasks to defer, the tasks to delegate and the risks I should watch.

Daily focus:

Top three actions:

What to delegate:

What to defer:

Workflow 2 - Weekly operating rhythm

Use this at the start or end of the week.

Prompt - Turn these notes into a weekly operating plan. Include priorities, risks, decisions needed, customer focus, team focus and follow-up actions. Keep it practical and suitable for a small business.

Weekly priorities:

Known risks:

Decisions needed:

Follow-up actions:

Workflow 3 - Turn notes into action

Use this after meetings, calls, site visits or busy shifts.

Prompt - Turn these rough notes into a clean action list. Use a table with action, owner, deadline, priority and status. Do not invent owners or dates. Mark missing information clearly.

Action	Owner	Deadline	Priority	Status

Workflow 4 - Draft better communication

Use this when a message needs to be clear and calm.

Prompt - Rewrite this message so it is direct, respectful and easy to act on. Keep the tone calm. Remove blame. Make the expected action clear. Keep it under [word count] words.

Message to improve:

Audience:

Desired action:

Workflow 5 - Build a simple SOP

Use this when a process lives in someone's head.

Prompt - Convert this process into a simple standard operating procedure. Include purpose, owner, when to use it, step-by-step instructions, quality checks, common mistakes and escalation points.

Process name:

Owner:

Steps:

Checks:

Escalation:

Workflow 6 - Review a report

Use this when a report has too much information.

Prompt - Review this report and summarise the most important changes. Separate signal from noise. Identify what improved, what declined, what needs attention and what decision should be made next.

Important changes:

Risks:

Decision needed:

Next action:

Workflow 7 - Think through a decision

Use this before acting on a meaningful decision.

Prompt - Help me review this decision. List the options, trade-offs, risks, assumptions, reversible parts, irreversible parts and the smallest next step. Do not make the decision for me. Help me think clearly.

Decision:

Options:

Risks:

Smallest next step:

Workflow 8 - Create a customer response

Use this when a reply needs empathy and structure.

Prompt - Draft a customer response based on these facts. Be empathetic, accountable and clear. Do not admit fault beyond the facts provided. Do not overpromise. Include the next step and expected timing.

Customer issue:

Facts:

Next step:

Timing:

Workflow 9 - Improve training material

Use this when a team member needs a clearer explanation.

Prompt - Turn this task into a training guide for a new team member. Include what good looks like, why the task matters, steps, checks, common mistakes and how a manager should assess understanding.

Task:

Standard:

Common mistakes:

Manager check:

Workflow 10 - Personal productivity review

Use this weekly to improve your own operating system.

Prompt - Review this list of work completed, missed tasks, interruptions and outcomes. Identify patterns. Suggest one system improvement, one habit to stop and one priority for next week.

What worked:

What created friction:

System improvement:

Next week priority:

Prompt library for common tasks

Prompt - Summarise this text into five bullet points and list any decisions or actions hidden inside it.

Prompt - Create three versions of this message: concise, warmer and more formal.

Prompt - Identify what information is missing before I can make this decision.

Prompt - Turn this messy idea into a clear brief with objective, audience, constraints and deliverables.

Prompt - Create a checklist for this recurring task.

Prompt - Review this plan and tell me where it may fail.

Prompt - Turn this customer feedback into themes and possible improvements.

Prompt - Create a one-page update for a busy manager.

AI workflow review

- ☐ Did this workflow save time?
- ☐ Did it improve clarity?
- ☐ Did it reduce repeated work?
- ☐ Did it protect sensitive information?
- ☐ Did a human check the output?
- ☐ Is the prompt worth saving?
- ☐ Should the workflow become a team standard?
